

Welcome to Kind Horn Farm, a certified organic Vermont Icelandic sheep farm. Our sustainable, [organic](#) methods of farming nourish the land and our animals. The Icelandic sheep are a medium sized breed of sheep, well known for being a triple purpose sheep: they are recognized world wide for [gourmet lamb](#) , lustrous and versatile [wool](#) , and amazingly rich [milk for](#) [dairy](#) and cheese making.

Kind Horn Farm specializes in certified organic Icelandic sheep for sale for registered breeding stock, fiber, and [grass fed](#) lamb. We were the first farm in the US to acquire certified organic status with an Icelandic sheep flock. Our farm has the largest certified organic flock of Icelandics in the United States and Canada. Kind Horn Farm is the only Icelandic sheep farm in the United States raising a flock that is both CERTIFIED ORGANIC AND REGISTERED with the Canadian Livestock Records Association. We offer certified organic breedstock, certified

organic fiber, and certified organic grass-fed lamb. We are located in South Duxbury, Vermont, in the heart of New England.

We strive to be one of the premier breeders of Icelandic sheep in the United States and Canada. Kind Horn Farm is actively breeding the "super sires" from Iceland using artificial insemination and our flock offers super diverse genetics and high percentages of AI lines in our pedigrees. This translates to top quality animals for breeding stock with excellent meat scores, above average fertility, superb milking qualities in the ewes, and, of course, amazing fleeces. We are enrolled in the United States Scrapie Program, Export Status, which allows us to export both ewes and rams to Canada. Our flock is very healthy, with no history of foot rot, OPP, Johnes, CL, etc.

We are passionate about our Icelandic Sheep and about raising them organically. Our farm works in harmony with nature.

[Why choose Kind Horn Farm for your Icelandic Breedstock?](#)

Our pastures are maintained without the use of chemical fertilizers, pesticides, herbicides, or other non-healthy materials. Our animals are lovingly raised without the use of antibiotics, chemical dewormers, or synthetic growth hormones. We practice MIG (intensive rotational grazing) from May through November. During the winter months our sheep are free to roam outdoors 24 hours a day.

[Why Organic?](#) Our reasons for farming organically are many. Basically though, we feel that organic farming is the healthiest choice-- even though it takes a little more work. Farming organically keeps our soil, air and water and food supply clean and provides a healthy farm environment. Organic farming makes healthy land, healthy animals, healthy food, and a healthy planet.

Kind Horn Farm is an eco-friendly farm committed to sustainable agriculture. Our farm operates completely off-grid -- we make all of our own electricity using solar and hydro power!
