

VISIR. White with rather coarse horns. Short and broad neck, good conformation and muscular shoulders. Extraordinary back muscling and superb loins, broad and muscled but not long. Extremely thick and well shaped gigots. Feets well placed and straight. Body lenght below average but conformation and muscling exceptionally good. **Wool:** Light tan fibers on feets and head and a little bit at the rear. Quantity more than average. Even and curled thog. No black fibers.

**Results:** Vsir was progeny tested in 2002 along with 6 other rams at Ytri-Skgar farm. Vsir came out in 1st place scoring 118. His progenies have great conformation, thick eye muscle and superb gigots. Average dressing weight was 16,1 kg and average carcass grading was 9,3 for meat qualities and 8 for leanness.

**Color Inheritance:** Visir is homozygous white.
