

Serkur is horned, black spotted. Shoulders are rather high and coarse, chest broad and conformation very good. Back and loins are muscular, thighs thick and well shaped. Serkur is very dashing ram and woollish.

Results

Serkur was progeny tested in 1998 and his progenies proved to be lean but coarse. His 1996 point evaluation came to a total of 79.5 points, and his eye muscle thickness was measured at 30mm, and his back fat at 7 mm. Progeny tested in 1998, and his lambs were described as lean. Serk

ur's shoulders are

rather high, his chest is broad and his conformation is very good.

Back and loins are muscular, and his legs thick and well shaped.

Serkur is of a good family and will without any doubt bring progress into colored sheep.

Color: Black, spotted, carrying moorit.
