

White, horned, rather longheaded. A bit coarse shoulders and good rib shape. Broad and strong back with good muscling. Very broad and muscular rump and thick and well muscled legs. Strong feet's. Very long bodied ram.

Light tan on head and feet's. Tan fibers on back and loins. Medium wool quantity, rather much thel and long, medium coarse and curly thog.

Kaldi has performed very well so far, carrying on very good meat qualities. His father was one of the best rams in Iceland according to his BLUP-indexes. Kaldi especially carries on leanness. His daughter are very prolific but Kaldi carries the Thoka gene which he has inherited from his mmf. They have average milking abilities.

Colour inheritance: Kaldi is heterozygous white carrying moorit and spotted. Therefore you can expect all colors on Kaldi's progenies.

Score 2003: 85,5 points

Ultrasound 2003: Eye muscle thickness 31 mm, back fat thickness 3 mm, muscle shape 4. (H)
