

Vali 10-907 from Gunnarsstadir farm, Thistilfjordur, Northeast- Iceland.

Conformation scoring: 2010-52-110-36/4,0/5,0-8,0-9,0-9,0-9,0-9,5-18,0-8,0-8,0-8,5=87,0 points

Description: White, horned with good looking head and narrow horn curving. Short and thick neck but rather coarse shoulders. Wide chest and average rib shaping. Strong and broad back, a bit narrow rump with good muscling. Very good gigot muscling. Strong feet and good body length.

Wool: Light tan on feet with little bit of tan fibers in the fleece. Wool yield a bit below average. Even the and rather short and fine thog.

Vali gets a good start as a father to daughters. Fertility: □ 107%, □ Milking abilities: □ 108%.

Results: Vali 10-907 was bought for AI in 2013 after performing very well at his birth fram. His progenies that were evaluated this autumn indicate that Vali carries on good weight but variable conformation. This variability can be noticed in eye muscle thickness, lamb evaluation and scoring and carcass grading. The results this autumn are in accordance with former results which are that Vali is performing better in carcass grading of progenies than evaluation on foot.

Color inheritance: Vali is heterozygous white but carries neither moorit or spotted.

Scrapie resistance genotype: Neutral.

2014 Ram lamb evaluation □ Overall MQI: □ 116

Number: 162

Weight, kg □ 47.4
